

Description

Screen ONVIF allows recording in real time and in high resolution, the image displayed on the screen of your computer into a DVR or NVR to allow recording IP cameras. It is ideal for controlling POS, Point of Information, Control Terminals or SCADA systems.

With this software you can capture everything that a security camera directed to the terminal can not see. Screen ONVIF hardly consumes resources, and works completely autonomously and imperceptible to the computer user form. It is easy to install on your PC, and once is the new software running and the computer connected to the network, the recorder detects it as if an ONVIF camera were, allowing you to record this signal on a channel available on the NVR or DVR without the need for adapters or complex integrations

Features

Retransmission of the first monitor like an ONVIF camera at 720p resolution.
